All ROMP efforts are directed towards maximizing value for our patients. We reach that goal through a three-prong strategy of clinical care, local investment, and advocacy.

**Quality Clinical Care**
- Provide medical care based on medical need, not cost
- Apply evidence-based standards that offer the best patient outcomes
- Develop and distribute high-quality technologies at low cost

**Local Investment**
- Train and employ local practitioners to provide services
- Strengthen local health systems through strategic partnerships
- Stimulate development through buying and hiring locally

**Advocacy**
- Raise public awareness of global lack of prosthetic and orthotic care
- Enable those with disabilities to redefine their human potential
- Connect people of all backgrounds in a common cause: mobility
Prosthetic limbs and orthotic braces are not simply medical devices, but instruments of personal empowerment.

We believe in equal access to prosthetic and orthotic services that facilitate independence through mobility.

We recognize the dual hardships of living in poverty with a disability, and stand in solidarity with those who are made to suffer from an unequal distribution of care.

We understand that disability is caused by broken devices and broken healthcare systems—not broken bodies. We work to increase the mobility, visibility, and dignity of all those marginalized by lack of access to rehabilitative technology.

Patient Profile
MEET JONATHAN

Jonathan, a 10 year old from the capital of Guatemala, was born with linear sclerosis. In order to live a more independent life, he had his left leg amputated in October 2017. He will be casted upon recovery 4-6 weeks after the surgery and will need continual follow-up care as he grows. His smile is infectious and his goals are the same as many kids: he wants to walk, to run, to not be bound to his wheelchair! He wants to be able to play with his friends in the parks and is very excited for what it means to hopefully have a prosthesis soon!

Total cost to fit Jonathan with a prosthesis: $1210
Liner $180, Knee $500, Foot $130, Modular Components $100, Fitting & Socket $300
ROMP worked diligently in 2017 to improve its model in order to increase impact

Research
• Performed nationwide mobility study to determine patient needs in Ecuador
• Published Situation Analysis of amputation in Guatemala used to inform 2018 Community Based Rehabilitation Program
• Clinical research and device testing with academic partners

Patient Care
• Strategic partnerships with prosthetic manufacturers to reduce cost
• Locally staffed, full-time clinic in Zacapa, Guatemala and Quito, Ecuador
• 285 prostheses delivered - 93% increase in 2017 vs. 2016
• Infrastructure upgrades at Guatemala clinic, improved patient experience, high quality device production
• Increased volunteer clinical programs from 2 to 6 in 2017
• Three-fold increase in US Patient care following launch of the ROMP US Assistance Program
• Processed thousands of pounds of recycled prostheses for distribution to ROMP sites through new Components for a Cause Program

Technology
• Delivered 13 3D printed prosthetic hands through locally staffed labs in Guatemala and Ecuador
• Digital modeling platform used to deliver 3D printed customs sockets in Ecuador
• Fully transitioned all paper patient records into ROMP custom Electronic Medical Record system
